

Socket Shoulder

Description

The Socket Shoulder Screw, offered by Hiyashvi Global LLP, is a high-precision fastener designed for applications requiring accurate alignment and smooth rotational movement. Featuring a cylindrical, unthreaded shoulder with a threaded section at the end, this screw is ideal for securing moving parts in machinery, pulleys, and gears. Manufactured from premium-grade materials, the socket shoulder screw provides excellent durability, corrosion resistance, and strength under varying loads. Its hexagonal socket head allows for easy installation and removal with standard tools, making it a versatile solution for both industrial and mechanical applications.
